The HiPace™ Innovation.

Picking Up the Pace in Vacuum Technology!
Faster. Higher. Stronger.

PFEIFFER VACUUM

HiPace™ Turbopumps

The HiPace™ innovation

Ever wonder why all turbopumps are called turbopumps today? It's because Pfeiffer Vacuum coined that name when it invented this versatile, pace-setting class of vacuum pumps some 50 years ago: Marking a definitive milestone in vacuum technology!

And now we take pride in presenting to you the latest generation of forward-looking pump technology for a broad range of applications: HiPace. In addition to analytical, vacuum-process and semiconductor technology, these pumps also cover the needs of coating, research & development and industrial applications.

Dry high-vacuum pumping station with HiPace™, XtraDry™ and TurboCube™

Calibrating pumping station with HiPace™ and OnTool DryPump™

Residual gas analysis with HiPace™ and PrismaPlus™

What is HiPace?

HiPace stands for a complete line of compact yet powerful turbopumps featuring pumping speeds that range from 10–700 liters per second. It offers a cost-effective yet flexible installation in any orientation¹⁾. The proven bearing system affords unrivaled dependability. The improved rotor design makes for higher pumping speeds, higher backing pump compatibility and higher gas throughputs coupled with very good compression for light gases.

Where are the advantages?

The new, integrated drive electronics reduce the need for cumbersome and costly cabling. Moreover, a variety of drive versions – including Profibus or DeviceNet – are available without any increase in physical size. Innovative materials have enabled us to double the service life of these powerful drive systems. And we have also significantly reduced run-up time for the HiPace pumps, which means that your process can start much earlier: An invaluable advantage in manufacturing environments!

We additionally provide you with expanded remote and monitoring functionalities that allow you to analyze pump data, such as temperatures, for example. Improved diagnostics will give you maximum uptime at lowest cost of ownership and support the service process.

¹⁾ Mounting orientation: HiPace 10, only horizontal; HiPace 300 C, 0°–90°

Are there additional advantages?

With improvements on our proven and optimized bearing technology, we offer you both, better product performance as well as longer service life than comparable competitive products. A sealing gas connection safeguards the bearings in all of the pumps in this series against particulate matter or oxidizing gases. In addition to its compact design, it also makes HiPace extremely rugged and suitable for industrial environments, which translates into optimal integration options. Time is money – so extended service intervals and easy, on-site bearing changes are advantages that speak for themselves.

And last but not least!

With the rigorously thorough engineering of the HiPace pumps, we are setting new trends in the industry. As exemplified not only by the functional housings that make these pumps extremely light and broaden their range of applications. Their innovative rotor geometry makes for quieter operation and significantly improved gas loads are also setting new standards. An integral water cooling²⁾ additionally demonstrates how turbopump performance can be enhanced even more, without "overpacing" them.

HiPace – These turbos are picking up the pace! Faster. Higher. Stronger.

²⁾ Integrated for pumps with TC 400 as a standard feature

HiPace™ 10

HiPace™ 80

HiPace™ 300

HiPace™ 700

Advantages at a glance

- ▶ Compact series of pumps with pumping speeds of from 10–700 l/s
- ▶ Robust engineering and proven bearing system offer maximum reliability
- ▶ Compact design makes for minimum footprint
- ▶ High gas throughputs and high pumping speeds
- ▶ Installation possible in any orientation¹⁾
- ▶ Suitable for industrial environments thanks to Protection Class IP 54
- ▶ Corrosive-gas version available
- ▶ Semi S2 and UL certification
- ▶ Complete line of accessories expands the range of potential applications
- ▶ Extended maintenance intervals
- ▶ On-site bearing change

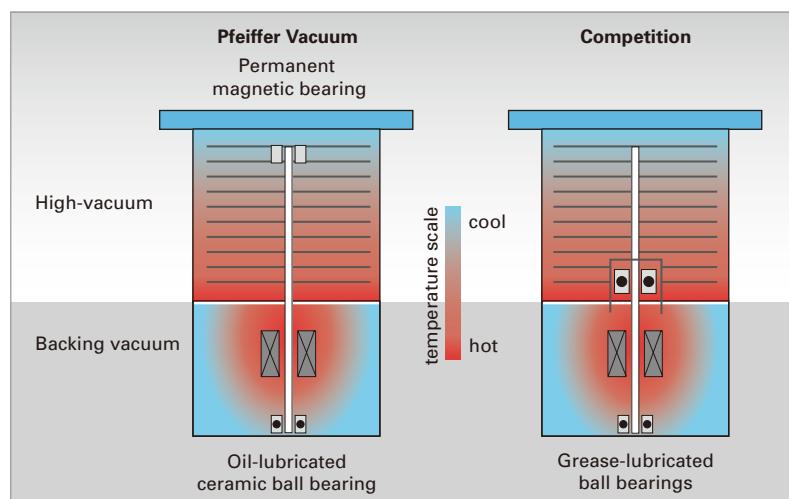

¹⁾ Mounting orientation: HiPace 10, only horizontal;
HiPace 300 C, 0°–90°

Reliability of bearing system

Highly reliable:

- ▶ Robust bearing system
- ▶ Smoother running
- ▶ Extremely low vibration
- ▶ Lower heat influence
- ▶ Minimum wear
- ▶ Mean time to failure > 200,000 hours
- ▶ Extended service intervals

Drive concepts

- ▶ Integrated – no cumbersome and costly cabling
- ▶ Small physical size – easy integration
- ▶ Expanded remote functions – higher flexibility
- ▶ Shorter run-up time – instantly ready
- ▶ Advanced pump management – operating parameter monitoring
- ▶ Designed for industrial applications – Protection Class IP 54
- ▶ Extremely low power consumption – conserves energy
- ▶ Innovative electronics – maximum reliability
